Project Design Phase-I
Solution Architecture

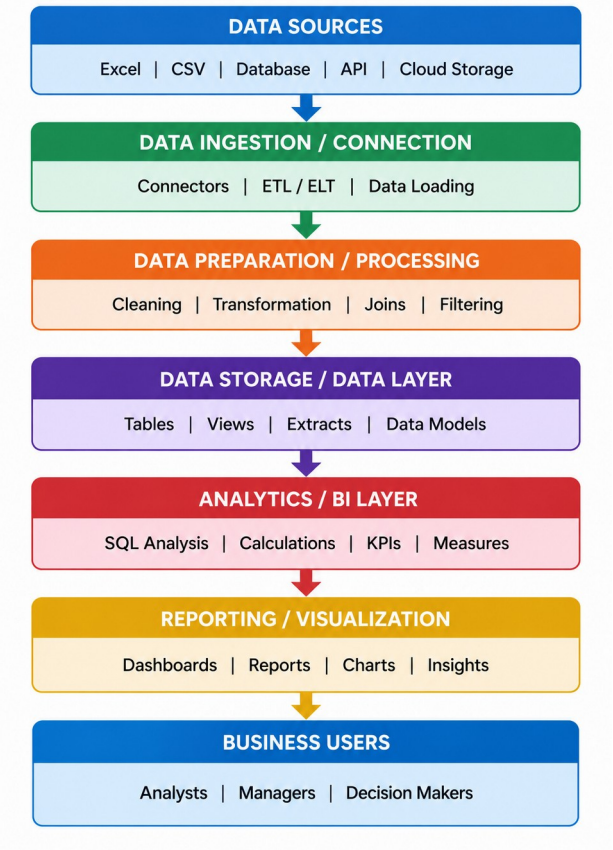

Date	24 October 2026
Team ID	
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behaviour, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Sample Solution Architecture Diagram:

Component Description Table

Component Name	Description / Role in Architecture	Technology Used
Data Sources	Static flat files containing historical Olympic data.	CSV (Kaggle/IOC)
Data Ingestion / Connection	Directly imports and joins the raw data for in-memory analysis.	Tableau Desktop Data Source Tab
Analytics / BI Layer	Calculates metrics (Avg Medals, Efficiency) and applies interactive filters.	Tableau Calculated Fields & Parameters
Reporting / Visualization	Displays maps, charts, and dashboards in a narrative structure.	Tableau Dashboards / Tableau Story
Web Application Layer	Serves the HTML pages and routes user traffic to the embedded dashboards.	Python (Flask), HTML5, CSS3 (Bootstrap)
