Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	5 Marks

Creating an effective dashboard involves thoughtful design to ensure that the presented information is clear, relevant, and easily understandable for the intended audience. Here are some key principles and best practices for dashboard design

Activity 1: Interactive and visually appealing dashboards

Creating interactive and visually appealing dashboards involves a combination of thoughtful design, effective use of visual elements, and the incorporation of interactive features.

Major Outcomes:

• **Historical Dominance:** The dashboard reveals that the USA and former Soviet Union consistently lead the all-time medal counts, dominating both Summer and Winter games across multiple eras.

• **Host Nation Surge:** Visualizations indicate a significant 20-40% spike in medal acquisition for nations during the years they host the Olympics (e.g., China in 2008, Great Britain in 2012).

• **Gender Parity Shift:** The temporal charts illustrate a steady climb in female athlete participation, moving from under 2% in the early 1900s to approaching a 50/50 split in recent decades.

• **Regional Sport Specialization:** The Tree Map reveals strong regional specializations, showing African nations dominating long-distance track events and Asian nations excelling in racket sports and gymnastics.

• **Efficiency Leaders:** While large nations win the most total medals, the efficiency metric highlights that smaller nations (like Jamaica in sprinting)

achieve the highest medals-per-athlete ratio in specific disciplines.

Activity 2

Publish Dashboard on Tableau Public and Paste the Dashboard Public link below:
