Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	5 Marks

By using stories in Tableau, you can effectively communicate complex data in a way that is both interactive and engaging, making it easier for the audience to follow along and understand the insights. It's a tool for **data storytelling**, allowing you to present insights in a cohesive, engaging way that takes viewers through a logical progression of findings or analyses.

In Tableau, **Story** is a feature that allows you to create a sequence of dashboards, visualizations, and text to present data insights in a cohesive and narrative-driven way. It's like a slideshow within Tableau that guides the audience through a series of data points, helping them understand key insights, trends, or outcomes of your analysis.

Observations:

• **Era of Globalization:** The story highlights the expansion of medal-winning nations post-1980, moving away from a bi-polar dominance to a more globally distributed and competitive medal table.

• **The Power of the Home Crowd:** A dedicated story point confirms the 'Host Nation Advantage', visually correlating hosting years with record-breaking overall performance for the host country.

• **Rise of Women in Sports:** Another sequence shows the dramatic shift in demographics, highlighting the introduction of new women's events and the resulting parity across modern Olympic games.

• **Geographic Strengths:** The geospatial story point confirms that Europe remains the most dominant continent historically, but Asian and Oceanian nations are rapidly increasing their overall medal shares.

Activity 2:

Publish Story on Tableau Public and Paste Public link below
