Scalability & Future Plan

Date	27 October 2026
Team ID	Not provided by user
Project Name	Global Olympic Sports Performance Analysis
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Static packaged extracts; source refresh is not automated.	May become stale when source data changes.	High
2	No verified public link or embedded Tableau Story object.	Reviewers may not interact with a public/live version.	Medium
3	Row-level data-quality and performance timings are not included.	Conclusions and scale limits remain partly unverified.	High

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	Single-user local TWBX	Opens locally; viewer-scale unmeasured.	Publish securely to Tableau Public/Server or governed BI environment; test concurrency.
2	Four packaged Hyper extracts	Self-contained workbook; no refresh pipeline evidenced.	Refresh from documented sources; consider warehouse/mart layer for growing data.
3	Seven worksheet views	No live response timing measured.	Optimize extracts, reduce unnecessary detail and benchmark on target data volume.
4	Descriptive sports data	No credentials required for local package.	Review data licensing, remove sensitive content and set publication permissions.

Future Roadmap:

Phase 1	Validate data and metrics	Before submission	Improve trust in reported findings.

Phase 2	Create Tableau Story points and publish verified workbook.	Next iteration	Provide a guided narrative and shareable access.
Phase 3	Load data into Snowflake only if required; run SQL quality/performance checks.	Optional extension	Improve data governance and repeatability.
Phase 4	Add scheduled refresh, richer definitions and more granular time/region comparisons.	Future scope	Support repeatable monitoring and deeper analysis.
